Strike On

Perps for every Cardano app

One tag puts Strike inside any wallet, dApp or community. Traders just connect their wallet. Builders earn on every fill.

Strike · on

Strike Finance hackathon submission · October 2026

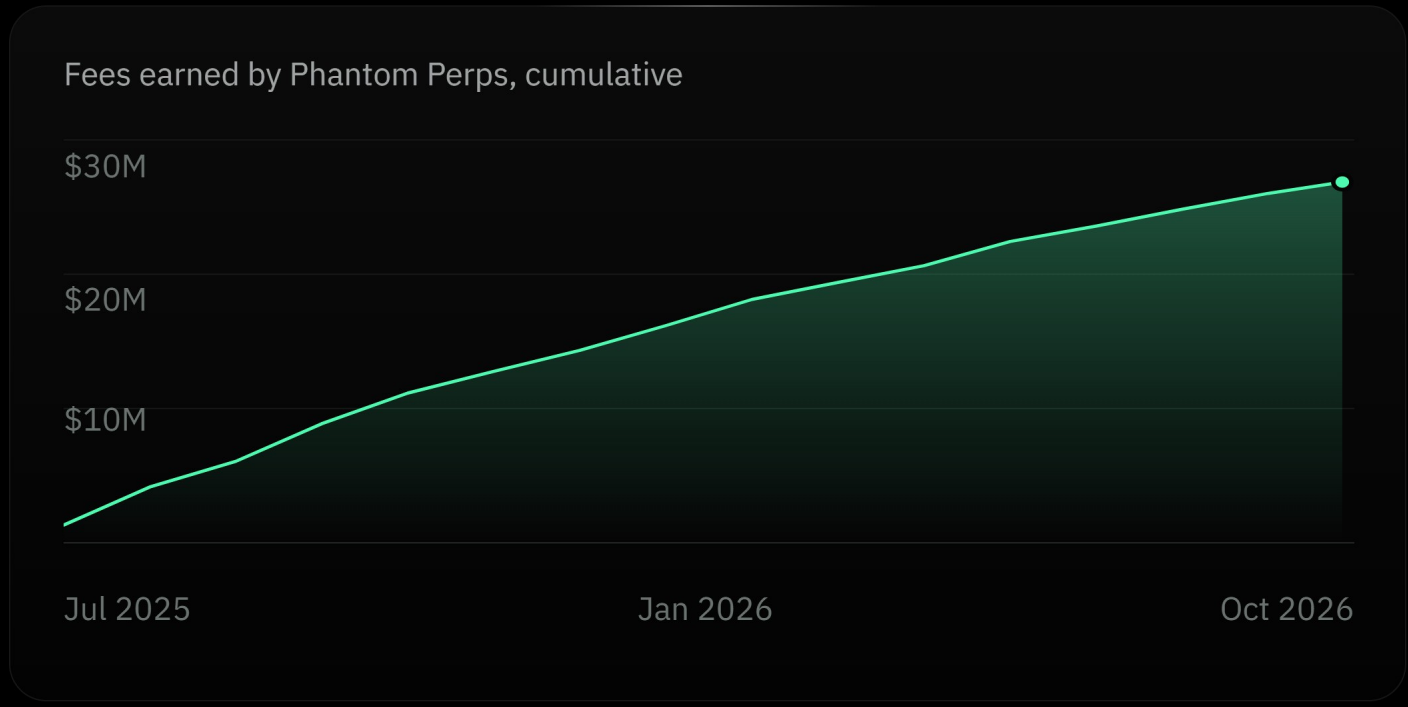

Perps grow where traders already are

Phantom put Hyperliquid perps inside its wallet. Fifteen months later:

$50B+
traded inside the wallet

192K
traders

$26.9M
in fees earned by the app

Phantom Perps only. Sources: Crypto Briefing, 15 Oct 2026; DefiLlama fees data to 19 Oct 2026.

Strike built the rails.
Strike On is the on-ramp.

Easy to embed

Load the script, place the tag. Ticket, full app or side panel.

HTML | App layout | React | TypeScript SDK

```
<script src="…/strike-everywhere.iife.js" defer></script>

<strike-trade
  builder-code="YOUR_CODE"
  fee-bps="5"
  market="ADA-USD">
</strike-trade>
```

Sign once. Trade without pop-ups.

Traders start from the wallet they already have. Every step stays inside the app.

Connect

1

signature, with any CIP-30 wallet

Deposit

1

signature, checked before the wallet asks

Trade

0

wallet pop-ups per order

Withdraw

1

signature, back to the same wallet

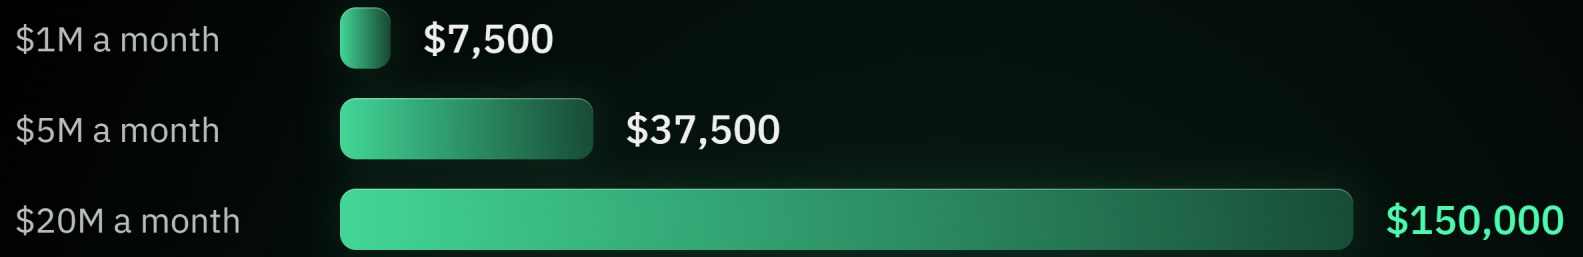

Tested on Strike testnet with Lace and Eternl.

Builders earn on every trade they route

The fee lands in the builder's Strike account the moment an order fills.

Trade		Builder fee		To the builder
$1,000	×	75 bps	=	$7.50

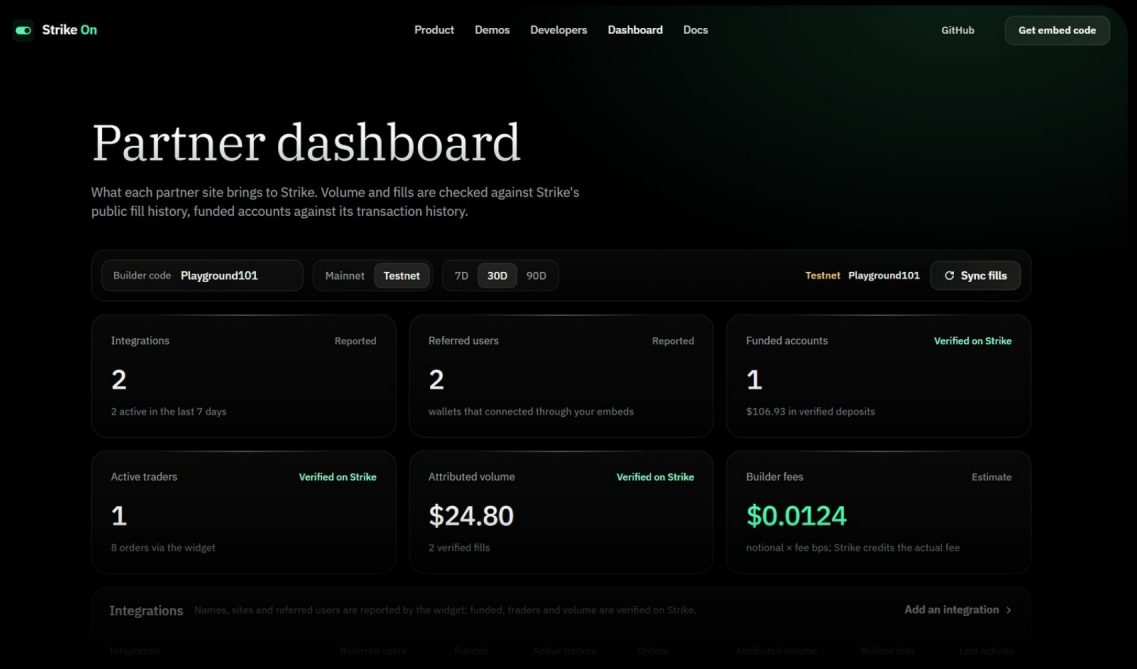

Monthly builder revenue at 75 bps, by volume routed through one app

Fee maths for illustration at 75 bps. Strike lets builders charge up to 100 bps (1%); Strike keeps its own trading fee.

Partners see exactly what they bring

Traders, volume and fees per integration, checked against Strike’s public history.

Example: volume by partner

North Wallet $4,650 fees

$620K

Orbit Portfolio $2,925 fees

$390K

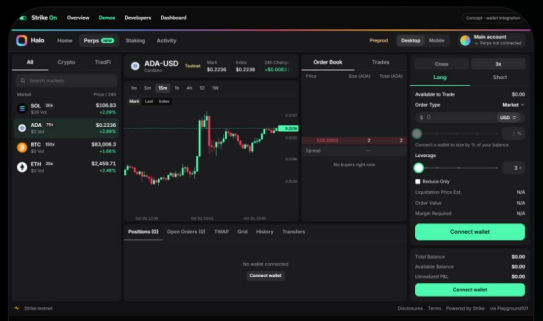

Pulse Community $825 fees

$110K

Screenshot: the live dashboard on testnet. Example partners and figures are illustrative, fees at 75 bps.

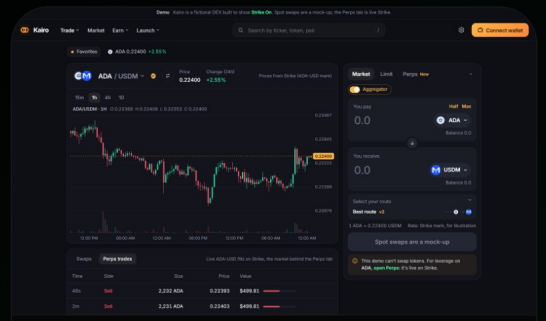

One embed, very different apps

Every demo is live. Open any of them and trade through the Strike panel.

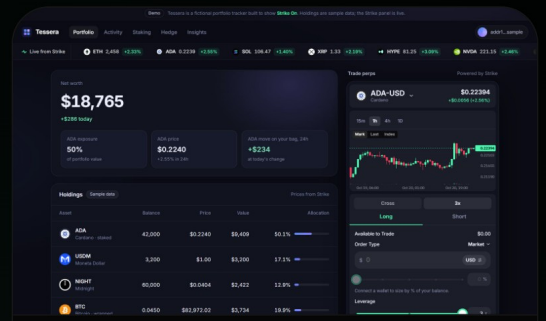

Wallet concept

Wallet-native perps

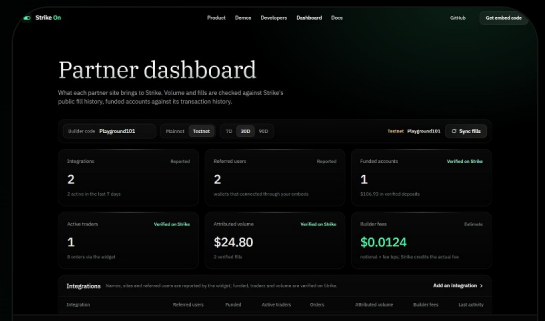

DEX

Swap, or go Perps

dApp

One-click ADA hedge

For builders

Partner dashboard

Good for Strike.
Good for every Cardano builder.

For Strike

A new door to Strike in every app. More traders, more volume, its full trading fee.

For builders

Perps without building an exchange, and a fee on every order their users place.

For traders

Perps inside the wallet and apps they already trust. Nothing new to learn.

Where it goes next

Now

Built and live

Widget, SDK and partner dashboard, running on Strike testnet with four demo apps.

Next

Mainnet and partners

Mainnet launch and the first Cardano partners, while we refine the widget and add more of Strike’s features for traders and builders.

Later

Scale with Strike

Partner onboarding at scale, then new chains, wallets and dApps in other ecosystems as Strike expands.

Strike, switched on.

An independent project built on Strike’s public Builder API. Not affiliated with Strike Finance.
